Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. All outstanding rejections are overcome by applicants' amendment filed 11/13/02.

The new grounds of rejection as set forth below are necessitated by applicants' amendment and thus, the following rejection is final.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 17-30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Applicants have amended claim 17 to recite that the "printed image is substantially retained within the upper protective layer." The scope of the claim is confusing because it is not clear what is meant by "substantially". How much of the image must be retained in order to be considered substantial? Can a portion of the image be retained in the ink receiving layer or other lower layers? If so, what portion? Further, it is not clear how an image can only be "substantially" retained. Wouldn't the image necessarily have to be fully or completely retained in order to produce a proper printed substrate? Clarification is requested.

Applicants point to example 3 and Figure 1 and argue that they clearly illustrate to one skilled in the art how the printed image is "substantially retained within the upper protective layer". However, from the Figure, it is not clear where layer 1, i.e. upper protective layer, ends

and where layer 2, i.e. ink-receiving layer, begins, and thus, it is not clear that the image is in fact substantially retained in the upper protective layer. Further, the Figure still does not make clear what is meant by "substantially". That is, it is still not clear what portion of the image must be retained in the upper protective layer in order to be considered "substantially" retained.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Romano et al. (U.S. 5,605,750) disclose ink jet recording medium comprising lower layer and upper image forming layer which comprises binder, however, there is no disclosure in Romano et al. that the upper layer comprises polymer particles having film-forming temperature

between 60 and 140 °C as required in the present claims and no disclosure of heating the printed image to form stable-image protecting coating as presently claimed.

Wexler (U.S. 6,457,824) disclose ink jet recording medium comprising base layer and top layer that retains image, however, there is no disclosure in Wexler that the top layer comprises polymer particles having film-forming temperature between 60 and 140 °C as required in the present claims. Further, given its effective filing date, this reference cannot be used as prior art under any subsection of 35 USC 102.
